# Kaseya Remote Control

**Kaseya Remote Control** is the primary remote control capability used throughout **Virtual System Administrator™**. **Kaseya Remote Control** connects in seconds to remote machines that already have **Kaseya Remote Control** installed. **Kaseya Remote Control** maintains a reliable, secure and encrypted connection.

- **Terminal Server Sessions** - You can remote into a Terminal Server, then select a user session to shadow. Shadow means the administrator shares the console session with the end user and can provide assistance to the user. The Terminal Services role must be enabled on supported Windows servers to use this feature and the group policy to shadow enabled.
- **Private Remote Control Sessions** - You can also use the **Private Remote Control** button in the **Quick View** (*page 9*) window to launch a private session. Private sessions enable administrators to connect to a machine, logon and remote control the machine without accessing the console. An end user working on the same machine at the same time cannot see the administrator's private session.

## Features

- Supports remote control with or without a machine user being logged in.
- Connects to the console session by default. If a user is logged on, the administrator shares the console session with the user.
- Allows the administrator to select any additional *monitors* that may be running on the remote system. Support viewing multiple monitors using different resolutions.
- Support for HiDPI Windows endpoints.
- Multiple view sessions can connect to the same agent machine, viewing the same monitor or different monitors, so long as the endpoint supports multiple concurrent connections.
- Copies and pastes (CTRL+C and CTRL+V) *plain text* between local and remote systems. Both systems share the same clipboard.
- Supports the use of numerous native **Windows and Apple shortcut keys** (<https://helpdesk.kaseya.com/entries/58322696>) on the remote machine.
- Uses the keyboard layout configured on the remote machine. Characters on the administrator's local keyboard might not match the characters shown on the remote user interface. Administrators can temporarily change the keyboard layout on the remote machine to map to their local keyboard. This might apply when entering passwords.
- Connects when a Windows machine is booted into *Safe Mode with Network*.

## Logging

- Kaseya Remote Control events are logged in the **Remote Control** log on the Agent > Agent Logs page. Log entries include the start time, end time, remote host ended the session, admin ended the session, session was ended unexpectedly, length of session, session admin name, name of the remote machine.
- You can set the number of days to maintain both the **Kaseya Remote Control Log** and the **Legacy Remote Control Log** on the Agent > Log History page. An additional checkbox specifies whether to archive these logs.

## Reporting

- A built-in **Kaseya Remote Control Log** report part can be used to create **Info Center** reports and report templates.
- A built-in **Remote Control Log** report template incorporates this report part..

## Kaseya Remote Control

**Note:** See **Kaseya Remote Control Requirements**

(<http://help.kaseya.com/webhelp/EN/VSA/9030000/Reqs/index.asp#18007.htm>).

### User Interface

The basic layout of the **Kaseya Remote Control** user interface includes the following:

- The machine name displays at the top of the remote control session window.
- A narrow menu bar displays at the top.
- A session latency indicator shows the latency in milliseconds between the administrator's local machine and the remote machine.
- When connecting to Windows machines only, a 'Send CTRL+ALT+DEL' option displays in the menu bar for remote logins.
- When multiple monitors are available on the remote machine, a drop-down list of monitors displays and can be selected to display a specific monitor.
- Closing the window disconnects the session.
- The default screen size for a session window is 1280 X 800. The default position is centered on the screen. New session windows use the size and position last used by the administrator.

### Starting Kaseya Remote Control

Click any agent icon  that supports **Kaseya Remote Control** to automatically start or re-start it. You can also hover over the agent icon to display **Quick View** (page 9). Click the **Remote Control** button to launch **Kaseya Remote Control**. You can also click the **Live Connect** button in **Quick View**.

### Installing and Updating Kaseya Remote Control

**Kaseya Remote Control** is installed as a viewer/server pair of applications: the viewer on the administrator's local machine and the server on the remote agent machine. The **Kaseya Remote Control** server is installed as a component of the agent when a new agent is installed, or when the agent is updated using Agent > Manage Agents.

If the **Kaseya Remote Control** application is not already installed on your local administrator machine, when you start your first session a dialog prompts you to download and install it. If already installed and a Kaseya patch release has made a later version available, a dialog prompts you to download and install the updated version. There is no independent launching of the **Kaseya Remote Control** application outside of the VSA.

---

## RDP

You can launch RDP sessions using the following methods:

- Navigate to Remote Control > Desktop Control > Control Machine and click on the hyperlinked machine.group name
- Use the 'RDP Machine' button on the Quick Launch ribbon of **Quick View** (page 9). To display the 'RDP Machine' button set the Select Type for the machine to RDP, then click the 'Gear' icon in Quick View to add the button in the configuration window.

These additional pages support RDP sessions:

- Remote Control > Configure > Select Type - You can now select the type of remote control session launched by each machine on the Control Machine page: K-VNC or RDP.
- Remote Control > Configure > Set Parameters - Sets options for RDP sessions.
- RDP sessions can be managed using User Role Policy and Machine Policy.

### Microsoft RDP

Microsoft RDP is licensed under terms set forth by the makers of Microsoft RDP (Microsoft) and is licensed separately. The VSA fully supports use of Microsoft RDP by you but does not automatically install it. You may use the VSA with your installations of Microsoft RDP to allow you to remote control Windows NT, 2000, XP, Vista, Windows 7, 8, 8.1, 2003, 2008, 2012, or 10 machines behind gateways without mapping ports or opening firewalls.

---

## K-VNC

A K-VNC remote control session can be started using the Remote Control > Control Machine page. Administrators should use the K-VNC for situations not supported by **Kaseya Remote Control** and **RDP** (page 3).

These additional pages support K-VNC sessions:

- Remote Control > Configure > Select Type - You can now select the type of remote control session launched by each machine on the Control Machine page: K-VNC or RDP.
- K-VNC sessions can be managed using User Role Policy and Machine Policy.

A K-VNC session provides a set of toolbar buttons to manage the remote desktop viewer. Hover the mouse over each button to display a tooltip. For an introduction to the toolbar see **RealVNC** (<https://www.realvnc.com/products/vnc/documentation/5.0/guides/user/af1014926.html>). Setting configuration options begins with **this topic**

(<https://www.realvnc.com/products/vnc/documentation/5.0/guides/user/af1015933.html>).

### Virtual Network Computing (VNC)

**Virtual Network Computing (VNC)**, also called **remote control** or **remote desktop**, is a graphical desktop sharing system which uses the Remote Framebuffer (RFB) protocol to remotely control another computer. It transmits the keyboard and mouse events from one computer to another, relaying the graphical screen updates back in the other direction, over a network. It is included with the Kaseya Server primarily to provide immediate technical support. VNC is platform-independent. A VNC viewer on any operating system can usually connect to a VNC server on any other operating system. The **VNC server** is the program on the remote machine that shares its screen. The **VNC client (or viewer)** is the program on the local machine that watches and interacts with the remote machine. The VNC client machine requires user access rights to the VNC server machine. Since Kaseya VNC sessions are relayed through the Kaseya Server, all VNC sessions are protected by 256 bit rolling encryption protocol.

# Live Connect

The **Live Connect** app is a single-machine user interface that runs natively on your local machine, independent of the browser you are using to log into the VSA. The **Live Connect** app is designed using a Material Design look and feel.

- The first page you see is the **Asset Summary** page.
- Multiple icons along the left provide access to other menus or pages.
- You can click the add tab **+** icon to work with multiple menu options for the same machine at the same time.
- Most data lists throughout **Live Connect** can be filtered and sorted.
- When upgrading to 9.3, enhanced Live Connect features do not display until agents are updated to 9.3.

**Note:** This updated version of **Live Connect** replaces **Live Connect (Classic)** (page 10). **Live Connect (Classic)** and **Quick View (Classic)** can be enabled by setting the **Use new Live Connect** when clicking the **Live Connect** button in **Quickview** option to **No** in **System > Default Settings**.

## Launching Live Connect

- If you hover the cursor momentarily over the agent icon, the Quick View window displays. You can use Quick View to launch **Live Connect**.
- The first time you launch **Live Connect**, you are prompted to download and install the **Live Connect** app on your local computer.

## Manage Servers

If you're not logged into the VSA already, you can run the **Live Connect** app from your local machine and a **Manage Servers** app displays. The **Manage Servers** app maintains the list of VSAs you have VSA admin access to.

Click any VSA you've added to the list. A login window displays. Enter your VSA admin credentials for that VSA.

A list of agent machines displays, based on your assigned VSA admin scope. Clicking any agent in the list launches a **Live Connect** app session for that machine. To re-display the agent list, click the add tab  icon. Click a different agent to launch another **Live Connect** app session. You can launch as many concurrent **Live Connect** sessions as your local machine's memory will support. Rows are grayed out if the agent has not been updated to 9.3.

Menu options on the agent list window include:

- Asset Summary  Displays the **Asset Summary** page in **Live Connect** for the selected machine..
- Remote Control  Starts a **Kaseya Remote Control** (*page 2*) session for the selected machine.
- Files  Displays a file manager for the selected machine.

## Live Connect

- You can also click the three dots icon to display additional options.

## Kaseya User Portal

A **Kaseya User Portal** (page 9) version of the new **Live Connect** layout displays when a machine user clicks the agent icon in the system tray. Menu options include Home, Agent, Tickets, Chat.

## Menus and Options

- Asset > **Asset Summary** - Serves as the landing page. Provides basic information about the managed machine.
  - **Machine Info** - Lists basic information about the managed machine.
  - **Thumbnail View** - The desktop of the currently logged on user displays in a thumbnail view, if a user is logged onto the machine.
  - **Memory/CPU/Volume** - Shows CPU %, memory % and disk space volume for the managed machine.
  - **Agent Procedures**
  - **Top 5 Processes**
  - **Agent Procedures**
  - **Top 5 Processes**
  - **User Info**
  - **Last 5 System Events**
  - **Network Info**
  - **Asset Info**
- Asset > **Asset Info**
  - **Computer Information**
  - **Disk Volumes**
  - **Memory Devices**
  - **Network Info**

- On Board Devices
- PCI and Disk Hardware
- Port Connectors
- Printers
- System Info
- System Slots
- Time Information
- Asset > **Documents** - Maintains a list of documents stored on the Kaseya Server associated with this machine. This same list can be maintained using the Audit > Documents page.
- Asset > **Log Viewer**
  - Agent
  - Alarm
  - Monitor Action
  - Configuration Changes
  - Legacy Remote Control
  - Kaseya Remote Control
- Asset > **Patch Status**
- Asset > **Procedures**
  - History
  - Logs
  - **Pending** - You can run, schedule or delete a pending procedure. You can also select and schedule a different procedure to run.
  - Run
- Asset > **Software**
  - Add / Remove
  - Installed Apps
  - Licenses
  - Startup
- Asset > **Users**
  - Accounts
  - Credentials
  - Groups
  - Members
- Remote Control > **Shared Session** or **Private Session** - Initiates a **Kaseya Remote Control** (page 2) session.
  - Keyboard
  - Monitor selector
  - Latency indication
- **Files** - Provides a file manager for the remote machine.

*Item Icons*

**Drive**  This list item is a drive.

**Folder**  This list item is a folder.

**File**  This list item is a file.

*List Item Options*

**Download**  Downloads the selected file.

**Rename**  Renames the select file or folder.

## Live Connect

- Delete**  Deletes the selected file or folder.
- Move to**  Moves the selected file or folder to another folder.
- Make a Copy**  Copies the selected file or folder

### Header Options

- Upload**  Uploads a file.
  - Create Folder**  Creates a new folder in the current folder.
  - Show Transfers**  Displays file transfers. Useful if the file is particularly large.
- **Commands** - Opens a command shell on the managed machine. Defaults to the system root directory.
  - **Services** - Lists services on a manage machine. You can stop, start or restart a service.
  - **Processes** - Lists processes on a manage machine. You can stop a running process.
  - **Registry** - Displays the registry of the managed machine ID. You can create, rename, refresh or delete keys and values, and set the data for values.
  - **Event Viewer** - Displays event data stored on the managed machine by event log type. **Event Viewer** data does not depend on Agent > Event Log Settings.
  - **Ticketing** - Displays and creates tickets for the managed machine. Displays and creates tickets for **Ticketing** module tickets or tickets and knowledge base articles for the **Service Desk** module, depending on which module is **activated**  
(<http://help.kaseya.com/webhelp/EN/KSD/9030000/index.asp#5478.htm>).

**Note:** Both the service desk and the organization or machine must be a member of the Anonymous scope (<http://help.kaseya.com/webhelp/EN/VSA/9030000/index.asp#4578.htm>) to display **Service Desk** tickets in Live Connect and Kaseya User Portal.

- **Chat** - Initiates a chat session with the currently logged on user of the managed machine. You can invite other VSA users to join your chat session. A chat session using the **Live Connect** is independent of the legacy Remote Control > Chat page.

**Note: See Live Connect Requirements**

(<http://help.kaseya.com/webhelp/EN/VSA/9030000/Reqs/index.asp#37313.htm>).

## Quick View

Hovering the cursor over a check-in icon displays an agent **Quick View** window immediately. You can use this window to view agent properties, start a shared or private **Kaseya Remote Control** (page 2) session, launch an agent procedure, or launch **Live Connect** (page 10).

## Kaseya User Portal

A **Kaseya User Portal** version of the new **Live Connect** layout displays when a machine user clicks the agent icon in the system tray. Menu options includes:

- **Home**
- **Agent**
- **Tickets**
- **Chat**

**Note:** Portal Access in R93 only works using Live Connect (Classic). Even if the Use new Live Connect when clicking the Live Connect button in Quickview option is set to Yes in System > Default Settings, Live Connect (Classic) will still be used when logging into the VSA using Portal Access credentials.

# Agent Badges

Add *badges* to the lower right corner of agent status icons, such as   . These badges display everywhere the agent icon displays in the user interface. For example, you could mark a machine with a  badge to indicate the customer requires a phone call before anyone works on that machine. Or mark a server with a  badge because you should not do anything to it until after hours. Select one or more machines on the Agent > Edit Profile page, then click the **Icon Badge** link at the top of the page and select one of the available badges. You can define a **Special Instructions** text message for each badge. Click the **Update** button to assign the badge to selected machines.

When you hover the cursor over an agent status icon with a badge, the **Quick View** (page 9) window displays the **Special Instructions** text in the bottom of the window.

# Live Connect (Classic)

**Note:** **Live Connect** (page 4) replaces **Live Connect (Classic)**. **Live Connect (Classic)** and **Quick View (Classic)** can be enabled by setting the **Use new Live Connect when clicking the Live Connect button in Quickview** option to **No** in **System > Default Settings**.

**Live Connect** is a web-based, single-machine user interface. You can access **Live Connect** by Ctrl+clicking the agent icon , or by clicking **Live Connect** button in **Quick View** (page 16). **Live Connect** enables you to perform tasks and functions solely for one managed machine. A menu of tabbed property sheets provide access to various categories of information about the managed machine.

Additional menu items display, depending on the add-on modules installed and the operating system of the target machine.

**Note:** Both the **Live Connect** and **Portal Access** plug-in installers can be pre-installed using the **Agent > Update Agents** page.

## Windows

Live Connect for Windows machines supports the following menu items: **Home**, **Agent Data**, **Audit Information**, **File Manager**, **Command Shell**, **Registry Editor**, **Task Manager**, **Event Viewer**, **Ticketing**, **Chat**, **Desktop Access** and **Video Chat**.

**Windows Cross-Platform OS Support:** On Windows XP and later systems, using any of our supported browsers, you can use the **File Manager**, **Command Shell**, **Registry Editor**, **Task Manager**, **Event Viewer**, **Desktop Access** enhanced features with Windows XP and later and **File Manager**, **Command Shell**, **Desktop Access** enhanced features with Mac OS X 10.5 Leopard (Intel) and later systems.

## Apple

**Live Connect** for Macintosh machines supports the following menu items: **Home**, **Agent Data**, **Audit Information**, **File Manager**, **Command Shell**, **Ticketing**, **Chat**, **Desktop Access** and **Video Chat**.

**Apple Cross-Platform OS Support:** On Mac OS X 10.5 Leopard (Intel) and later systems, using any of our supported browsers, you can use the **File Manager**, **Command Shell**, **Desktop Access** enhanced features with Windows XP and later and Mac OS X 10.5 Leopard (Intel) and later systems.

## Linux

**Live Connect** for Linux machines supports the following menu items: **Home**, **Agent Data**, **Audit Information**, **Ticketing**, **Chat**, and **Video Chat**. Does not include a thumbnail preview image of the desktop in **Live Connect**. Use the Control Machine, FTP and SSH pages to remote control Linux agents.

## Window Header

Basic information about the managed machine displays at the top of the **Live Connect** window.

- **Thumbnail View** - The desktop of the currently logged on user displays in a thumbnail view, if a user is logged onto the machine.
- **Machine Info** - Lists basic information about the managed machine.
- **Performance Graphs** - Shows CPU % and Memory % performance graphs for the managed machine.
- **Log Off** - Only displays if a machine user using **Portal Access** is logged in remotely from the machine.
- **Help** - Displays online help for **Live Connect**.

## Menu Options

A menu of tabbed property sheet provides access to various categories of information about the managed machine.

- **Home** - *The **Home** tab is the first tab displayed when the **Live Connect** window opens.*
  - **Home** - Typically the **Home** tab displays a welcome message and the URL page of the agent service provider. The **Run Procedures** section of the **Home** tab enables the **Live Connect** user to run agent procedures on the managed machine immediately. A **Custom Links** section may display on the **Home** tab, if specified by the service provider, offering links to additional resources. Multiple customized **Home** tabs are possible, each with a unique name, if specified by the service provider.
  - **Change Logon** - Changes the *remote* logon user name and password for this managed machine. These logon options enable a user to access the **Live Connect** window to this managed machine from any other machine, including initiating a remote desktop session with the managed machine, if **Desktop Access** is enabled by the service provider. Enter the same URL used to logon to the VSA. Then enter the **Live Connect** user name and password specified in this tab. Accessing **Live Connect** remotely in this manner from another machine is called **Portal Access**. **Portal Access** logon options can also be maintained within the VSA using Agent > Portal Access.
  - **Change Profile** - Changes the contact information for this managed machine. This information populates a ticket with contact information when **Live Connect** is used to create a ticket. This information can also be maintained using Agent > Edit Profile.
- **Agent Data** - Displays the following tabs:
  - **Pending Procedures** - Displays and schedules pending agent procedures for a managed machine and the **Procedure History** for that machine. Includes the execution date/time, status and user who scheduled the procedure.
    - ✓ Click the **Schedule Another Procedure** button to schedule a procedure not yet pending. Once selected and scheduled, the procedure displays at the bottom of the **Pending Procedures** section.
    - ✓ Click the **Schedule** button to schedule a selected procedure to run in the future or on recurring basis.
    - ✓ Click the **Run Now** button to run a selected procedure once immediately.

## Live Connect (Classic)

- ✓ Click the **Cancel** button to cancel any selected pending procedure.
- **Logs** - Displays the logs available for a machine: Alarm Log, Monitor Action Log, Agent Log, Configuration Changes, Network Statistics, Event Log, Agent Procedure Log, Remote Control Log, Log Monitoring.
- **Patch Status** - Displays **Missing** and **Pending** Microsoft patches and schedules missing patches. If a machine belongs to a patch policy, missing patches may be further identified as **Denied (Pending Approval)**. The user can manually override the denied patch policy by scheduling the patch.
  - ✓ Click the **Show History** link to display the history of patches installed on the managed machine.
  - ✓ Click the **Schedule** button to schedule the deployment of missing patches.
  - ✓ Click the **Scan Now** button to scan for missing patches immediately.
  - ✓ Click the **Cancel** button to cancel a selected pending patch.
  - ✓ Click the **Set Ignore** button to prevent installing a patch using any of the installation methods. To be installed, the **Set Ignore** checkbox must be cleared.
  - ✓ Check the **Hide patches denied by Patch Approval** - If checked, patches denied by Patch Approval are not displayed.
- **Agent Settings** - Displays information about the agent on the managed machine:
  - ✓ **Agent version**
  - ✓ **Last check-in**
  - ✓ **Last reboot**
  - ✓ **First time check-in**
  - ✓ **Patch Policy Membership** - Defined using Patch Management > Membership: Patch Policy
  - ✓ **View Definition Collections** - Defined using the **Only show selected machine IDs** option in View Definitions.
  - ✓ **Working Directory** - Can also be defined using Agent > Manage Agents.
  - ✓ **Check-In Control** - Can also be defined using Agent > Check-In Control.
  - ✓ **Edit Profile** - Can also be defined using Agent > Edit Profile.
- **Documents** - Lists documents uploaded to the Kaseya Server for a managed machine. You can upload additional documents. Provides the same functionality as Audit > Documents.
- **Get File** - Accesses files previously uploaded from a managed machine. Click the link underneath a file to display the file or run it. Provides the same functionality as Agent Procedures > getFile().
- **Audit Information** - Information tabs include: **Machine Info**, **Installed Apps**, **System Info**, **Disk Volumes**, **PCI & Disk Hardware**, **Printers**, **Software Licenses**, and **Add/Remove Programs**. Provides audit information based on your Latest Audit. You can perform an immediate audit using the **Machine Info** tab.
- **File Manager** - Displays two file managers, one for your local machine and one for the managed machine. Using the *upper panes* only you can:
  - Create directories and delete, refresh or rename files or directories using either file manager.
  - *Move* files within the *same* file manager using drag and drop.
  - *Copy* files *between* file managers using drag and drop.
- **Command Shell** - Opens a command shell on the managed machine. Defaults to the `c:\windows\system32` directory.
- **Registry Editor** - Displays the registry of the managed machine ID. You can create, rename, refresh or delete keys and values, and set the data for values.
- **Task Manager** - Lists Windows Task Manager data for the managed machine. You can stop or prioritize **Processes**, stop and start **Services**, check typical **Performance** benchmarks for each process, categorized by CPU, disk, network, and memory, review **Users** session data, **Reboot**,

power off the managed machine, or log off sessions on the managed machine, and display **User and Groups** on the managed machine. Launching the **Task Manager** lets you create or modify monitor sets using a wizard, based on processes and services. Hovering the cursor over the monitor icon of a log entry displays a wizard.

- A monitor wizard  icon displays next to each process and service listed on the **Processes** and **Services** tabs of the **Task Manager**. These two wizards enable you to create a new monitor set criteria based on a selected process or service. The new process or service criteria can be added to any new or existing monitor set. The new or changed monitor set is immediately applied to the machine that served as the source of the process or service criteria. Changing an existing monitor set affects all machines assigned to use that monitor set. See Monitor > Monitor Set > Process Status and Monitor > Monitor Set > Services Check a description of each field shown in these two wizards.
- **Event Viewer** - Displays event data stored on the managed machine by event log type.
  - A monitor wizard  icon displays next to event log entries in the VSA and in **Live Connect**. Hovering the cursor over the monitor wizard icon of a log entry displays a wizard. The wizard enables you to create a new event set criteria based on that log entry. The new event set criteria can be added to any new or existing event set. The new or changed event set is immediately applied to the machine that served as the source of the log entry. Changing an existing event set affects all machines assigned to use that event set. The monitor wizard icon displays in:
    - ✓ Agent > Agent Logs
    - ✓ Live Connect > Event Viewer
    - ✓ Live Connect > Agent Data > Event Log

See Monitor > Event Log Alerts for a description of each field shown in the wizard.

- **Ticketing** - Displays and creates tickets for the managed machine. Displays and creates tickets for **Ticketing** module tickets or tickets and knowledge base articles for the **Service Desk** module, depending on which module is activated.

**Note:** Both the service desk and the organization or machine must be a member of the Anonymous scope to display **Service Desk** tickets in Live Connect and Portal Access.

- **Chat** - Initiates a chat session with the currently logged on user of the managed machine. You can invite other VSA users to join your chat session. See Remote Control > Chat for more information.
- **Remote Control** - Initiates a **Kaseya Remote Control** (*page 2*) session with the managed machine.
- **Video Chat** - If a machine user is logged on to a managed machine, then a **Live Connect** user can initiate a audio/video chat session with that logged on machine user. The session can be audio only for one or both machines if video is not supported on one or both machines.
  - **Video Chat with the Machine User** - Click the Call button to initiate the video chat session. The machine user will see a browser window or browser tab display on their machine that lets them see your video image and their own video image if their machine has a webcam installed.
  - **Video Chat with Anyone** - Click the Connect URL button. This copies a URL to your clipboard. Copy the URL address into any email or instant message program and send it to anyone. When that URL is entered in a browser the individual will be able to video chat with you. *Video chat does not require the person receiving the chat invitation to be a managed machine.*
  - **Video Chat Confirmation** - The Adobe Flash Player used to transmit the audio/video stream requires each user click an "Allow" button to proceed with their side of the video chat.
  - **Audio/Video Controls** - Hover the mouse over either video image in the chat window to display audio/video controls.
  - **Text Chat** - You can text chat and video chat at the same time using the same window.

## Live Connect (Classic)

- **VPN** - Windows only. Clicking this option creates a VPN connection between your local machine and the **Live Connect** machine. Once connected, the administrator can connect to other machines sharing the same LAN as the **Live Connect** machine, even if those machines do not have an agent installed on them. This includes using applications such as SSH, or telnet or creating another browser instance that targets these other machines on the same LAN. The VPN session ends when the **Live Connect** window closes or the **Stop VPN** button is selected on the **VPN** menu.
- **Anti-Malware (Classic)** - Displays the **Anti-Malware (Classic)** status of the managed machine, if installed.
- **Antivirus (Classic)** - Displays the **Antivirus (Classic)** status of the managed machine, if installed.
- **Data Backup** - If **Data Backup** is enabled for the managed machine, you can use this menu to:
  - Run backups immediately.
  - Restore selected backups, directories and files, but only to the same machine.
  - Display the status and history of backups.
- **Discovery** - Displays the **Network Discovery** status of the machine, if installed.

## Plugin Manager

**Live Connect**'s enhanced functionality of the browser is managed by a *plug-in manager*.

- **Plug-in Manager Installation** - The user is prompted to install Plug-in Manager after the first logon. Installation of the Plug-in Manager can be deferred until **Live Connect** is started for the first time.
- **Plug-in Updates** - IE and Firefox browsers will detect plug-ins that are out of date and automatically download them in the background. Browser restart is not required for these two browsers. Chrome and Safari browsers also detect out of date plug-ins and automatically download them in the background, with little to no user interaction required.

## Additional Notes

- Access to specific **Live Connect** functions depends on access rights in System > User Roles > Access Rights and Machine Roles > Access Rights.
- All of the **Live Connect** menu options are enabled when the machine is connected to **Live Connect**. Only **Home**, **Audit Information**, **Agent Data** and **Ticketing** are enabled when the machine disconnected from **Live Connect**.
- You can customize the **Live Connect Home** page using System > Customize: Live Connect (page 16).
- **Event Viewer** data does not depend on Agent > Event Log Settings.
- If a `externalLink.xml` exists in the `\Webpages\install` directory of the Kaseya Server a **New Ticket** link displays next to the **Help** link in **Live Connect**. Clicking the **New Ticket** link redirects users to the URL specified in `externalLink.xml`. See **Customized New Ticket Link** (page 16) for details.

---

# Setting User Role Access Rights for Live Connect (Classic)

You can configure the functions displayed during a **Live Connect** session to VSA users using the System > **User Roles** > Access Rights tab.

## User Role Access Rights

The **Access Rights** tab in the System > **User Roles** page determines what functions VSA users belonging to a selected role can perform. For example, access rights can include whether or not a user can open, add, edit or delete a particular record.

**Note:** Scopes determine whether a user can see certain user-created data structures displayed in the VSA. Roles determine access rights to the functions that act on those data structures.

A navigation tree provides access to each module, folder, item, and control in the VSA.

- Click the  or  icons next to any item in the tree to display or hide child branches of that item.
  - A checked item means a role provides access to that item.
  - A unchecked item means a role does *not* have access to that item.
  - Click **Expand All** to expand the entire tree.
  - Click **Collapse All** to collapse the entire tree.
- Click **Set Role Access Rights** to change access rights for a role.
  - Checking or clearing any checkbox sets the same state for any child items.
  - Click **Enable All** to enable all items.
  - Click **Disable All** to disable all items.

### Setting User Role Access Rights for Live Connect

A separate **Live Connect** module is listed along with other modules in the **Access Rights** tab tree. You can set different combinations of access rights for each user role and assign them to different populations of VSA users.

**Note:** The access rights displayed for a role are determined by the roletypes assigned to that role. See [System > User Roles](#) for more information about role types.

### Multiple User Role Home Tabs

If more than one **Home** tab is defined using the [System > Customize > Live Connect](#) page, then both **Home** tabs display in the [System > User Roles > Access Rights](#) tab tree, underneath the **Live Connect > Home** menu checkbox. For example, you might have two **Home** tabs, one called **Home** and a second one called **Resources**. You can enable or disable one or more home pages in the **Access Rights** tree for each user role. This affects the **Home** tabs displayed to the different populations of VSA users using these user roles. See [Customize: Live Connect](#) (page 16) for more information.

---

## Customize: Live Connect (Classic)

System > Customize > Live Connect

The **Customize: Live Connect (Classic)** page customizes **Home** tabs that display in the **Live Connect (Classic)** (page 10) and Portal Access (Classic) windows. You can create multiple, customized **Home** tabs and save them by name.

These **Home** tabs are enabled for a particular role by checking the checkbox underneath Live Connect > Home in:

- System > User Roles > Access Rights
- System > Machine Roles > Access Rights

You can customize three sections on the default **Home** page.

- **Portal Header** - Customize the text and image displayed at the top of the **Home** tab.
- **Agent Procedures** - Provide a customized list of agent procedures that the user can run immediately from this tab.
- **Custom Links** - Provide a customized list of URLs that the user can click using this tab. For example, you could provide a URL to a website page providing technical information used to troubleshoot problems on managed machines.

### Make available to All Tenants

If checked, this Home page can be added to user roles and machines roles on all tenant partitions. This option only displays for master role users.

---

## Customized New Ticket Link in Live Connect (Classic)

To customize **New Ticket** links on the **Live Connect (Classic)** page, fill out the `externalLink.xml` file as described in the comments section of the XML below. To activate the new ticket link, place the `externalLink.xml` file in the `\WebPages\install\` directory of your Kaseya Server.

```
<?xml version="1.0" encoding="ISO-8859-1" ?>
<externalLinks>
  <!--
  URL STRING SUBSTITUTIONS: The URL string displayed is associated
  with a particular machine ID. The string is searched for the following
  case sensitive values and substituted for the values below.
  machineNameVal - the machine name for the active machine is substituted
                   in the URL string.
  groupNameVal - the group name for the active group.
  -->
  <ticketLink displayName="Ext Ticket"
  url="http://192.168.212.52/?mname=machineNameVal&gname=groupNameVal" />
</externalLinks>
```

---

## Quick View (Classic)

**Note:** **Quick View** (page 9) replaces **Quick View (Classic)** (page 10). **Live Connect (Classic)** and **Quick View (Classic)** can be enabled by setting the **Use new Live Connect when clicking the Live Connect button in Quickview** option to **No** in **System > Default Settings**.

Hovering the cursor over a check-in icon displays an agent Quick View window immediately. You can

use this window to view agent properties, start a shared or private Kaseya Remote Control session, launch an agent procedure, or launch Live Connect.

Two functions are unique to the Quick View window.

### Screen Shot

Click the **Screen Shot** button to snap an image of the current desktop. You can access saved images by clicking the **Get File** folder icon in the same **Quick View** window.

### Private Remote Control

You can use the **Private Remote Control** button in the **Quick View** window to launch a private session. Private sessions enable administrators to connect to a machine, logon and remote control the machine without accessing the console. An end user working on the same machine at the same time cannot see the administrator's private session.

## Portal Access (Classic)

**Note:** Portal Access in R93 only works using Live Connect (Classic). Even if the Use new Live Connect when clicking the Live Connect button in Quickview option is set to Yes in System > Default Settings, Live Connect (Classic) will still be used when logging into the VSA using Portal Access credentials.

Portal Access (Classic) is a Live Connect (Classic) session initiated by the machine user. The machine user displays the **Portal Access** page by clicking the agent icon  on the system tray of a managed machine. **Portal Access** contains machine user options such as changing the user's contact information, creating or tracking trouble tickets, chatting with VSA users or remote controlling their own machine from another machine. **Portal Access** logons are defined using Agent > Portal Access. The function list the user sees during a **Portal Access** session is determined by the System > Machine Roles page. You can customize **Portal Access** sessions using the System > Customize > **Live Connect** (page 16) page.

# Setting Machine Role Access Rights for Portal Access (Classic)

## Machine Roles

The **Machine Roles** page controls access to the **Portal Access (Classic)** (page 17) window.

## The Default Machine Role

A predefined **Default** machine role is provided when the VSA is installed. Newly created machine ID accounts are automatically assigned to the **Default** machine role when the account is created. If you create other machine roles, you can re-assign machine ID accounts to these other machine roles. You might want to do this if you want to limit machine user access to functions on the **Portal Access** page for different populations of machine users. Each machine ID account can only belong to a single machine role.

## Machine Role Access Rights

The **Access Rights** tab in the System > **Machine Roles** page determines what functions *machine users* can perform on machines belonging to a selected machine role. For example, access rights can include whether or not a machine user has access to their own machine remotely from another machine.

A navigation tree provides access to each item and control on the **Live Connect** page.

- Click the  or  icons next to any item in the tree to display or hide child branches of that item.
  - A checked item means a machine role provides access to that item.
  - A unchecked item means a machine role does *not* have access to that item.
  - Click **Expand All** to expand the entire tree.
  - Click **Collapse All** to collapse the entire tree.
- Click **Set Role Access Rights** to change access rights for a machine role.
  - Checking or clearing any checkbox sets the same state for any child items.
  - Click **Enable All** to enable all items.
  - Click **Disable All** to disable all items.

## Setting User Role Access Rights for Live Connect

A single **Live Connect** module is listed in the **Access Rights** tab tree of System > **Machine Roles**. You can set different combinations of access rights for each machine role and assign them to different populations of machine users.

**Note:** The access rights displayed for a role are determined by the role types assigned to that role. See [System > Machine Roles](#) for more information about role types.

### Multiple Machine Role Home Tabs

If more than one **Home** tab is defined using the [System > Customize > Live Connect](#) page, then both **Home** tabs display in the [System > Machine Roles > Access Rights](#) tab tree, underneath the [Live Connect > Home](#) menu checkbox. For example, you might have two **Home** tabs, one called **Home** and a second one called **Resources**. You can enable or disable one or more home pages in the [Access Rights](#) tree for each machine role. This affects the **Home** tabs displayed to the different populations of machine users using these machine roles. See [Customize: Live Connect](#) (page 16) for more information.

## Accessing Portal Access (Classic) Remotely

[Agent > Portal Access](#)

**Note:** Portal Access in R93 only works using Live Connect (Classic). Even if the [Use new Live Connect when clicking the Live Connect button in Quickview](#) option is set to [Yes](#) in [System > Default Settings, Live Connect \(Classic\)](#) will still be used when logging into the VSA using Portal Access credentials.

The **Portal Access** page defines the logon name and password, by machine ID, required to use **Live Connect** as a machine user *remotely*. A **Live Connect** session run by a machine user is called **Portal Access**. The functions displayed using **Portal Access** are determined by the [System > Machine Role > Access Rights](#) tab.

**Note:** Both the **Live Connect** and **Portal Access** plug-in installers can be pre-installed using the [Agent > Manage Agents](#) page.

### Accessing Portal Access Locally

Machine users do not have to logon to **Portal Access** locally. Clicking the agent icon in the system tray of their machine initiates the **Live Connect** session without having to logon.

### Accessing the Portal Access Logon Page Remotely

A user can display the **Portal Access** logon page for their own machine from another machine as follows:

1. Browse to the [http://your\\_KServer\\_address/access/](http://your_KServer_address/access/) page, substituting the appropriate target KServer name for [your\\_KServer\\_address](#) in the URL text.

**Note:** This is the same page that VSA users use to logon to the VSA.

2. Logon by entering the user name and password assigned to machine user's machine ID. This user name and password is specified using the [Agent > Portal Access](#) page in the VSA. The **Portal Access** page displays. The machine user can click any menu option as though he or she were logged in from their own managed machine. The user can click the **Desktop** or **File Transfer** menu options to initiate a remote connection to their own machine, create or view ticket, or initiate a chat, if these options are enabled.

A **Log Off** link displays only for machine users accessing **Portal Access** remotely from their machine.

---

## Enabling Ticketing for Portal Access (Classic) Users on Unsupported Browsers

**Live Connect (Classic)** (page 10) and **Portal Access** are not supported on certain browsers, such as browsers older than IE8 or Firefox 3.5. Machine users required to work with unsupported browsers can be enabled to create and view Ticketing tickets as follows:

1. Create a separate machine role for unsupported browser users in System > Machine Roles. For example, create a **Tickets Only** machine role.
2. For the new machine role you just created, uncheck the **Live Connect** checkbox in the System > Machine Roles > Access Rights tab.
3. Assign machines with unsupported browsers to this new machine role.
4. When machine users click their agent icon, a single **Ticketing** window displays instead of the **Portal Access** window.

**Note:** Enabling this option applies to all users using the same managed machine.

---

## Learning More

PDFs are available to help you quickstart your implementation of **Virtual System Administrator™**. They can be downloaded from the **first topic in the VSA online help**

(<http://help.kaseya.com/webhelp/EN/VSA/9030000>).

If you're new to **Virtual System Administrator™** we recommend the following quickstart guides:

1. Getting Started
2. User Administration
3. Agent Configuration and Deployment
4. Remote Control Tools
5. Monitoring Configuration
6. Custom Reports

The following resources are also available.
